Science Fair 10 Science Ideas I'm Curious About Worksheet

Your assignment is to come up with a list of ten scientific questions in which you are interested. Essentially, these can be any questions that you are curious about, or anything that you remember from a Science Class that you didn't quite understand, or anything else that you have just 'often wondered'. We will spend some time going over ideas in the next couple of weeks. Examples: (You may use up to one of these examples as one of your 10 questions) "How does the solar system work?", "How does concentration affect sports performance?", "What kind of music is best for studying?", "Can hydrangeas really tell acidic soil from basic soil?", "What is lightning?", "How do we see different colors?", "What are non-Newtonian liquids?"

Before you start, don't just write things down. Spend some time thinking about what interests you. You might be quizzed on why you chose your questions.
